

# ready to go

“Ready To Go” items (RTGs) are devices that TADNSW has provided regularly over time to a fixed design. They address a range of needs, generally relating to young children of up to primary school age.

These devices are easy to request as there is no custom sizing or variation involved. The pricing process is straightforward and the device can be produced with minimal delay once we receive an order.

## Ordering

RTG prices are available on the TADNSW website. The prices are updated to reflect changes in material and delivery costs, so please check for the current price at the time of ordering.

To request an RTG, please submit an order form (available from our website), nominating which device(s) you require and the quantity. We will despatch your order upon receipt of your form, and send you an invoice with the delivery.

You can request variations to the design of an RTG, but this will become an Individual Solution and will take longer to supply. Please turn to page 38 for more information about Individual Solutions.

## TAD weighted block trolley

A stable, counterweighted aid for children who need additional support while learning to walk.

### Features

- a counterweight is installed at the front end of the trolley
- front castors mounted beneath the tray make it easy to steer
- trolley dimensions:
  - 330mm wide x 285mm high x 420mm long
  - tray depth approximately 120mm
  - handle height range adjustable between approximately 490mm – 630mm from floor level

## TAD mobility stool

Provides seated mobility for adults working with children at low level tables, or assisting them in learning to walk.

### Features

- the seat is firmly anchored to a platform base mounted on castors
- the platform base can be used for storage
- stool dimensions:
  - seat height 320mm above floor level
  - seat 280mm wide, 300mm long
  - base 315mm wide, 445mm long

### Magnetic geometry set

Enables children with single hand function or limited grip strength to use plastic geometric shapes for drawing.

#### Features

- the standard plastic school geometry set includes a 30cm ruler, 45/45/90 set square, 30/60/90 set square and protractor
- the set pieces are backed with magnetic material and provided with a thin steel plate
- small grip handles are attached to the front of the set pieces for ease of use

### Magnetic paper holder

Holds paper to enable children with single hand function to cut it independently.

#### Features

- enables paper to be elevated and held stable
- a screw clamp secures the holder to the desk surface for greater stability and easy use with one hand

## External switching adaptation for battery-powered toys

Battery-powered toys are converted so they can be turned on and off using an external switch. The toy may then be suitable for use as a reward activity or to teach cause and effect to children with limited hand function.

Toys that have complex interactions may not perform well by interrupting the battery power alone. In this case a more sophisticated modification may be required to activate the toy.

### Features

- a 3.5mm jack socket is inserted into the power on/off circuit of the toy, and mounted conveniently on the case or through the fur of the toy for external access
- when the external switch is disconnected, the toy can still be operated normally by its own power on/off switch
- the client provides their own external switch with cable and jack plug to suit their specific requirement

# ready to go exercise and recreation

## Sit-to-stand ladder with seat

Allows children to practice standing up from a sitting position (age guide: 12 months – 6 years).

### Features

- the sturdy ladder and adjustable seat are fixed to a common base for stability
- the ladder width, height and rung diameter are customised to user requirement
- the height-adjustable seat provides side and back support
- the spacing between the seat and ladder can be set to suit the user

### Options

- the stool and ladder can be supplied separately (see photo of the separate ladder on page 33)

## Billiard cue rest set

Allows people with limited hand function to position a billiard cue

### Features

- the set includes two pieces which allow a variety of shots
- the first allows shots to be played off the rail, and the second on the felt
- each piece has a weighted brass base for stability
